

# DIY DINO GARDEN

## GETTING STARTED...

Millions of years ago our gardens were the home of some prehistoric creatures... DINOSAURS! They swam in our rivers, played in the sand and munched on some yummy plants. Certain plants today look like they are from a desert dino garden from millions of years ago.

So let's get ROARRRRINNGGGG!!!!

## HERE'S SOME DINO PLANTS

### PONYTAIL PALM

Check out this awesome palm with its shady leaves, perfect for your dinosaurs to rest under. They need a bit of space in your garden so they can spread out that wicked leafy hair!

### PIGFACE

Getting its name from its fruit, the pig face will be a great addition to your dino garden. A yummy snack for your dinosaurs to munch on and beautiful purple flowers for some colour.

### LITHOPS

These awesome succulents look just like dinosaur eggs and are perfect for your dino garden. With their little flowers which are called 'fluffy bums', lithops do great in a desert garden.

### A COUPLE ADDITIONS....

How about adding a watering hole, quick sand or even a volcano to your dino garden!!! It'll totally take you back in time...
