

Hi [REDACTED], appreciate the additional time. However, we will decline to respond to the follow-up question.

Regards,

[REDACTED]

Hi [REDACTED],

Of course, that would be perfect, thanks.

Cheers,

[REDACTED]

Hi [REDACTED],

Just following up in office hours.

Thanks again for the response from Woodside, we'll incorporate into our program, both on air and online.

Regarding our follow up Q about Alex Hillman's accusations of greenwashing, do you have an estimate for when we can expect a response? We're working to a tight deadline, and are keen to include Woodside's perspective on this accusation.

Cheers,

Hi [REDACTED],

Thank you for this response, we'll incorporate it into our program.

Can I ask a follow up question?

Re your plans to get to Net Zero. Alex Hillman has since accused Woodside of "greenwashing", suggesting that your targets don't include any of the fossil fuels products sold by Woodside.

- How do you respond to these claims of "greenwashing"?
- Is it true that your targets don't include any of the fossil fuel products you sell?

I'm happy to chat about a reasonable timeline to respond to this follow up question.

Cheers,

Subject: RE: Request for comment: Woodside Energy

Hi [REDACTED], please see below responses attributable to a Woodside spokesperson.

- 1. Can you confirm that Alex Hillman worked at Woodside Energy until 2020, with the majority of his time at the company spent in the role of climate change advisor?**

We can confirm that Alex Hillman previously worked at Woodside. However, we do not comment on the activities of former employees.

- 2. Can you confirm that Alex Hillman represented Woodside Energy at APPEA?**

As above – we do not comment on the activities of former employees.

In this [article](#) and our interview, Alex states the opinion that Woodside Energy is not seriously committed to its net zero targets.

- 3. How does Woodside respond to this?**

We strongly disagree with Mr Hillman's opinion. Woodside is reducing net equity Scope 1 and 2 greenhouse gas emissions, targeting a 15% reduction below the 2016-2020 average by 2025; and 30% by 2030. Our progress was reported to the Australian Government Carbon

Emissions Reduction Target (CERT) Report. Key elements of the CERT report draw on and are verified using data held by the Clean Energy Regulator. The Regulator's Corporate Emissions Reduction Transparency (CERT) report is [here](#).

4. How does Woodside justify expanding its oil and gas portfolio when the IEA has said that the world needs to transition away from fossil fuels?

Please refer to our [Climate Report](#) for a full analysis of Woodside's approach. But you should note that even in the IEA's "net zero scenario", some US\$365 billion needs to be invested in maintaining upstream oil and gas supply every year to 2030. In the IEA's Sustainable Development Scenario, which it describes as a "gateway to achieving the outcomes targeted by the Paris Agreement", Asia-Pacific gas demand increases by 37% between 2020 and 2030, and remains above 2020 levels in 2050. Woodside's LNG can help Asia to decarbonise, for example by replacing coal, supporting renewables, and in hard to abate uses.

5. What efforts has Woodside made to decarbonise its operations and portfolio?

Woodside's climate strategy has two elements: reducing our net emissions; and investing in the products and services that our customers need as they reduce their emissions (see our [Climate Report](#) and answer to 3).

6. Does Woodside's net zero targets include the emissions from its products - ie, scope three emissions? If not, why not?

We have set near and medium-term targets to reduce net equity scope 1 and 2 greenhouse gas emissions:

- 15% by 2025
- 30% by 2030

below 2016-20 annual average of gross equity Scope 1 and 2 emissions.

You will see from our [Climate Report](#) that we have a Scope 3 emissions plan containing three elements: investing in new energy products and lower-carbon services; supporting our customers and suppliers to reduce their net emissions; and promoting global measurement and reporting.

As part of our approach to Scope 3 emissions, we have set a target to invest US\$5 billion in new energy products and lower-carbon services by 2030. The new energy opportunities we are pursuing include proposed hydrogen and ammonia projects in Australia and the US.

Regards,
