CRAIG KELLY MP Response in Advance to MediaWatch 2nd August 2021

This response has been compiled before the *MediaWatch* program went to air, and as such I'm at a very significant disadvantage as not having the full details of any spurious claims that the programme may make, and therefore I'm unable to respond in any detail to put forward data debunking any such claims.

It's the equivalent of someone on trial being asked to put up their defence when they don't know the full extent of the claims against them.

Is Craig Kelly "anti-vaccinations" or a "vaccine sceptic".

• Certainly not. I have taken all the numerous vaccines over the years and I regularly have an injection of the flu vaccine for winter. Further, I have promoted the flu vaccine by being photographed being injected and posting this to my social media sites.

- If I stood on a rusty nail, I would immediately rush off and get a tetanus injection, as tetanus injections have a long safety record and proven track record of being effective.
- However, the Covid vaccines currently being rolled out use a novel technology, that has zero
 medium term and zero long term safety data. These covid vaccines are significantly different from
 the traditional style of vaccines that we have grown up with and that have been in wide use for
 decades.
- There is no current method of accurately measuring the short-term adverse events from the Covid vaccines. In the USA, they rely upon the VAERS (Vaccine Adverse Events Reporting System), which is

a system of passive and voluntary reporting, which likely grossly underestimates the number and extent of the actual adverse events. Likewise, the reports of adverse events from the vaccines in Australia to the TGA, rely upon on a system of passive and voluntary reporting.

- The <u>TGA are currently reporting</u> 0.4% adverse events from the Covid injections, however, and most concerningly, <u>AusVax Safety</u> (which uses a system of follow up with SMS's within 3 days after the injection) is reporting adverse events from the vaccines at 46.1% 100 times greater that the TGA. Therefore, there is a significant question over the accuracy of the data for short term adverse events.
- Given that our history demonstrates that large Pharmaceutical companies, with vested financial
 interests, have at many times pushed dangerous drugs on to the market that later had be
 withdrawn, and that many highly credentialled and experienced medical professionals (in a growing
 number) are questioning the assertions of "safe & effective" promoted by the vaccine sellers every member of Parliament has a duty to be highly sceptical of the vaccine sellers claims.
- To causally dismiss the concerns of world leading experts, and to blinding follow and parrot the claims in the vaccine sellers' marketing brochures and not be sceptical, would be a reckless abandonment of the duties of a member of the Australian Parliament.

Are the Covid-19 vaccines "experimental" ?

- Absolutely and without question.
- In the USA, the Covid vaccines only have '<u>Emergency Use Authorisation</u>' from their FDA. Vaccine makers will need to apply to the FDA for full approval to continue use of these vaccines after the pandemic.
- In Australia the Covid Vaccines have the equivalent of a 'Provisional Approval', which includes strict conditions such as the requirement to provide further long-term efficacy and safety information from the ongoing clinical trials and post-marketing assessment from the reporting of adverse reactions.
- Further, as noted above, there is no long-term safety data available for the Covid vaccines.
- Therefore, by simple definition, the Covid vaccines are unquestionably "experimental". To pretend otherwise, or to put some spin on it, and claim they are *not* experimental would be sophistry of the highest order, and I hope that MediaWatch does not make such claims mislead ABC viewers.

Is Pzifer a 'fizza' against the Delta Variant ?

• The term 'fizza' or 'fizzer' is Australian slang for 'a thing that disappoints or fails to succeed'.

- The Pzifer vaccine was launched with great fanfare, <u>with claims of 90% efficacy</u> that it could stop 90% of Covid infections.
- Israel was the first nation out of the blocks with a nationwide campaign of mass vaccination, which
 was undertaken with the using exclusively the Pfizer Covid vaccine. The then Israeli Prime Minster
 Benjamin Netanyhau at the time referred to Israel being <u>"the Global Test case for the Vaccine
 efficacy".</u>
- Thankfully, perhaps because of their confidence in the success of the Pfizer vaccine, the Israeli Ministry of Health publishes very extensive public data on their Corona 'dashboard' which enables real world analysis of the Pfizer vaccine efficacy against the companies assertions.
- A recent article claimed that the Pfizer Covid vaccine was just 39% effective against the Delta variant, however this is flawed, as it fails to weight the efficacy across different age groups in Israel. I trust that *Mediawatch* will not rely on this debunked calculation that uses a flawed statistical method and that MediaWatch actually presents the latest data from Israel in some detail to their viewers.
- The most recently published data by the Israeli Ministry of Health, shows that for each age group, the percentage of population "fully vaccinated" is equivalent to the percent of the population amongst new infections in each of those same age group that has been fully vaccinated.

Pfizer Failure Israel - New Covid Cases Ages 20 - 89 20th June - 17th July																			
														I	NE	W INFECTIO			
													Age Group	Total No.		Fully Vaccinated	Non Vaccinated		% Total New Infect. of Fully Vaxxed
20-29	1,024		796	228		77.7%	71.90%												
30-39	1,150		894	256		77.7%	77.40%												
40-49	1,392		1,174	218		84.3%	80.90%												
50-59	490		441	49		90.0%	86.40%												
60-69	866		794	72		91.7%	86.90%												
70-79	545		513	32		94.1%	92.80%												
80-89	160		144	16		90.0%	91.20%												
Total	5,627		4,756	871		84.5%

• In fact, for each of the age groups 20-29, 30-39, 40-49, 50-59 and 60-69 the latest data demonstrates that Pfizer has less than zero efficacy in preventing infections. Therefore, it could not be more crystal clear that Pfizer is a complete fizza (ie: it disappointed and has failed to succeed) against the Delta variant in terms of preventing infections.

		NE		% of New	% Pop.	
Age					Infected	Fully
Group	Total		Fully Vaxed	Unvaxed	Fully Vaxed	Vaxed
20-29	952		758	194	80%	72%
30-39	1,142		898	244	79%	78%
40-49	1,088		918	170	84%	81%
50-59	680		575	105	85%	85%
60-69	632		585	47	93%	87%
70-79	369		349	20	95%	93%
80-89	160		146	14	91%	91%
90+	42		33	9	79%	90%
			Ĩ			
Total	5,065		4,262	803	84%	

- In respect of deaths, fortunately the number of recent Covid deaths reported in Israel is small. Data
 from the Israeli Ministry of Health records where there have been 1,2,3 or 4 events as 'less than 5',
 which leaves a wide margin of error when the numbers are small. However, from the data, it's clear
 that the total number of covid deaths are more from people 'fully vaccinated' than from people
 unvaccinated.
- For the week 11th July 17th July 2021, the data records that there was a total of 10 deaths 8 of them amongst the 'fully vaccinated' and only 2 amongst the vaccinated – which yet again demonstrates that Pfizer is a fizza.
- Further, in respect of deaths, a 6 month follow-up of the large randomized trial of the Pfizer vaccine has just been published. Although it finds less infections in the vaccinated group (against the earlier variants – not current dominant Delta variant) the study found **no** mortality benefit for the vaccinated. During the blinded, controlled period of the study, 15 fully vaccinated participants died, compared with 14 placebo (unvaccinated) participants.

Has the medical advice from experts stated that the Vaccine is "unfit for use in humans"?

- There is a growing list of medical experts world-wide that all calling for the immediate halt of the vaccine roll out both safety grounds and lack of efficacy.
- In a recent letter, Dr. Tess Lawrie (MBBCh, PhD) an adviser to the WHO wrote;

"An immediate halt to the vaccination programme is required whilst a full and independent safety analysis is undertaken to investigate the full extent of the harms, which the UK Yellow Card data suggest include thromboembolism, multisystem inflammatory disease, immune suppression, autoimmunity and anaphylaxis, as well as Antibody Dependent Enhancement (ADE) The MHRA now has more than enough evidence on the Yellow Card <u>system to</u> <u>declare the COVID-19 vaccines unsafe for use in humans</u>. Preparation should be made to scale up humanitarian efforts to assist those harmed by the COVID-19 vaccines and to anticipate and ameliorate medium to longer term effects. As the mechanism for harms from the vaccines appears to be similar to COVID-19 itself, this includes engaging with numerous international doctors and scientists with expertise in successfully treating COVID-19."

• Dr Lawrie's analysis has also recently been endorsed by many other experts including Professor Peter McCullough.

Claims you're on a mission to spread fear and doubt about COVID-19 vaccines

- I don't believe that in a free and democratic society that 'ignorance is strength' as so are advocating.
- 'Informed consent' must be at the heart of any mass medical treatment, and for there to be informed consent, the Australian public deserves to have all the facts, both good and bad in relation the vaccine safety and efficacy. But sadly, we are living in an environment of censorship and cancel culture, where any dissenting expert medical opinion (from a large and growing group of highly credentialled medical experts), dissenting from the current Government narrative is being censored and crushed.
- I believe the Australian public deserves an honest and open debate, and sadly that is not happening.
- Ultimately, I have merely being expressing the expert health advice, that has been stating that we cannot bet the house on the vaccines and that early treatment with antivirals is an essential part of the fight against covid. Interestingly Pfizer themselves are <u>now openly agreeing with this</u>.
